

ONLINE LEARNING

"Online learning has enabled myself and my fellow students to collaborate and share ideas, which are available during and after lessons. It has proven to be an effective way of course delivery with a seamless transition from face-to-face learning to online. Furthermore, the ability to use online learning on a variety of desktop and mobile devices means that tutors, course resources and lesson content can be accessed 24/7."

Will Matthews

Higher National Diploma in Computing

"I found online learning to be a really positive experience as I had already built up a good relationship with my assessor, Carol. She has been very supportive and really easy to get in touch with when I have had any questions whilst I have been carrying out my work online. I also enjoyed being able to learn in my own time and around my own schedule. This has given me a lot more flexibility with my learning."

Holly Conway, Level 3 Early Years Educator Apprentice at Selby College

"Most days I don't find it difficult to get up and start doing my coursework on my computer. My tutors are always willing to support me and sometimes I even get help from the other students. I actually get a little more work done when working from home and enjoy learning within our virtual classrooms, which are run in Microsoft Teams."

Bethany Stonarch, BTEC National Extended Diploma in IT student
