

# SKILLS CONNECT

## Nurses into General Practice

This course provides you with the essential skills needed to undertake core-activities within General Practice, through a comprehensive initial assessment you will be directed to a package of modules to meet your own professional development ambitions, as well as the needs of your employer.

### Course Overview

This course is designed to provide you and your employers with the opportunity to broaden your professional competencies, allowing yourself as a practitioner to gain skills in specialisms including; Travel Health, Immunisation and Vaccination, Phlebotomy, and Sexual Health and Family Planning. You will be able to access three fully-funded, immersive, and practitioner-led modules, from the following categories:

- Self-Directed Study - mandatory/ statutory training
- Diabetes Management
- Medicine Management
- Wound Care Management
- Hypertension & Cardiovascular Health
- Sexual Health & Contraception
- Immunisation & Vaccination
- Asthma Management
- Phlebotomy
- Health Promotion, Counselling, and Motivational Interviewing
- Understanding the Quality Outcome Framework
- Understanding Learning Disabilities
- Ear Care & Irrigation
- Chronic Obstructive Pulmonary Disorder

Upon completion you will be qualified to undertake the activities you have been trained in, supporting service users within General Practice and working with colleagues to provide patient care.
